

GUBER

America's Trust Infrastructure Layer.

A nationwide **Human API for Truth** — verified identity, on-platform money, and structured proof of work, wired into a single real-world coordination network.

INVESTOR BRIEF · 2026 · GUBERAPP.COM

THE PROBLEM

Trust is breaking — online and offline.

Across every category of everyday transaction, the cost of **not knowing who you're dealing with** is rising.

AI-generated fraud

Synthetic photos, fake sellers, and ghost listings now infect every major buy/sell platform.

Unsafe local transactions

Strangers meeting strangers with no shared identity layer, no shared ledger, no shared proof.

Real-world verification gap

Cars bought remotely. Contractors hired sight-unseen. No on-demand human verification network exists for everyday people.

This isn't a niche problem — it's **infrastructure that doesn't exist yet.**

THE SOLUTION

GUBER is the Human API for Truth.

A nationwide network connecting people who need **help, work, or verification** with real people who can deliver real-world action.

ID

Verified identity — both sides

Mandatory ID + selfie. No anonymous accounts.
Sex-offender screening at onboarding.

\$

On-platform payments

Stripe Connect for every dollar. Escrow on lock-in, payout on confirmation. Fully traceable.

Structured proof of work

GPS-locked photos, video, dynamic checklists.
The proof layer no incumbent collects.

A **real-world trust layer** usable for any task where one human needs to verify something for another.

MISSION

Built for everyday people.

An equal-opportunity platform where **access to work, income, and trust does not depend on who you know.**

Opportunity, not gatekeeping

Anyone with verified ID and willingness to show up can earn. No résumé bias, no referral wall, no opaque algorithm picking winners.

Proof beats pedigree

Reputation is built from GPS-verified, timestamped jobs — not follower counts or paid badges. Trust is earned through action.

Reputation is portable

Every completed job and on-time payout builds a structured, portable record the user owns — across categories, cities, and time.

Infrastructure for people, not just enterprises

The same trust stack powering B2B verification deals also powers a neighbor helping a neighbor. One platform, both directions.

WHY NOW

The window is open.

The conditions that make GUBER necessary **did not exist five years ago.**

The crisis is compounding

- **AI-generated fraud** floods every consumer platform.
- **Marketplace scams** rise at every price tier.
- **Remote buying** happens sight-unseen at scale.
- **Gig sprawl** leaves millions with no portable trust record.

The infrastructure is finally cheap

- Smartphone GPS + on-device ML make a national verification network **economically possible** for the first time.
- Stripe Connect safely moves money between millions of unrelated parties.
- The same AI wave that **created** the crisis makes "verified human" **a feature people pay for.**

The category does not have a category leader yet.

PRODUCT

One operating system. Three connected layers.

Live in production today on web and Android. iOS App Store launch in progress.

LAYER 01 · CORE MARKETPLACE

The productive engine.

Where verified people get work done for verified people — backed by structured, evidenced proof.

Work & Hire	LIVE
Verify & Inspect	LIVE
GPS Proof Engine	LIVE

LAYER 02 · TRUST LAYER

The verification spine.

The data and identity moat — what every other GUBER surface is built on.

Identity Verification	LIVE
AI or Not · Trust Box	LIVE
Portable Reputation	LIVE
Stripe Money Ledger	LIVE

LAYER 03 · GROWTH LAYER

The activation engine.

Where the trust layer is monetized — by brands, businesses, and creators on the same network.

Cash Drops	LIVE
Business Tools	LIVE
Sponsored Activations	LIVE
Content Studio	LIVE

Each layer reinforces the next — **verified people** earn, **trust data** compounds, **growth surfaces** monetize the same network.

PRODUCT · SECOND REVENUE RAIL

Built-in creator & business activation infrastructure.

GUBER Content Studio — an AI media engine wired into every verified account. Businesses generate ads, creators ship content, and digital revenue is layered on top of marketplace activity — **all without ever leaving the platform.**

What it does

- **Cinematic motion clips** from a single reference photo (Kling Motion Control · 80 cr).
- **Mirror-motion videos** for short-form social — 5s and 10s (Wan Motion · 30 / 60 cr).
- **Business commercials** generated in-app for small businesses.
- **Brand music** via MiniMax (5 cr).
- **For You feed** at /studio/explore — vertical snap-scroll of curated generations that pulls non-Studio users into trying the tool.
- Sessions are temporary by design — generated assets purge automatically — so storage cost stays flat as usage scales.

How it makes money

Two Stripe rails wired today: one-time credit packs *and* recurring monthly tiers.

Credit packs (one-time)

Spark · **\$5** / 330 cr
Pulse · **\$10** / 700 cr
Charge · **\$25** / 1,800 cr
Power · **\$50** / 3,800 cr
Surge · **\$100** / 8,000 cr
Whale · **\$200** / 16,000 cr

Monthly tiers

Standard · **\$10.99** / mo
Business · **\$37.99** / mo
Enterprise · **\$99** / mo
+ Day-1 OG: **+20 cr/mo** rollover
+ Free 2-credit trial on every signup
All charges via Stripe today

Marketplace prints transaction revenue. Studio prints high-margin digital revenue from the same audience — zero extra acquisition cost. Software-margin economics layered on top of marketplace-volume economics.

The Human API for Truth.

Software can guess. **A verified human at the location, with a phone, and proof, knows.** GUBER turns that simple idea into a nationwide on-demand verification network.

How it works

- **Request** — anyone (consumer, business, marketplace) requests a real-world check or task.
- **Match** — the closest verified helper is matched in seconds.
- **Verify** — helper completes the task with GPS-locked photo, video, and structured checklist.
- **Settle** — Stripe Connect pays the helper instantly, GUBER takes its cut, requester gets evidence on file.

Every verified job adds to the helper's portable resume **and** to GUBER's proprietary real-world data layer — both compound over time.

Why this is defensible

- Two-sided verified identity — incumbents only verify one side, or neither.
- Structured GPS + photo + checklist proof — **a dataset no one else collects.**
- Network effect: every new verified helper expands what GUBER can verify, where, and how fast.
- The data layer becomes an addressable B2B product over time — insurance, lending, marketplaces, and OEMs all need real-world proof.

Market indicators.

GUBER sits at the intersection of large, named markets — all growing, all undergoing structural change, all citable to third-party research.

Market projections are third-party estimates and do not represent guaranteed company performance.

BUSINESS MODEL

How GUBER makes money.

Five revenue categories. Fourteen wired streams. **All running on Stripe today.**

Direct Offers (Stripe Connect)	Hirer (gross-up math)	Application fee	Live
Sponsored visibility / content licensing	Brand sponsor	Per-impression / pack	Emerging

COMMUNITY ACTIVATION

The next-generation real-world advertising network.

Cash Drops are **sponsor-funded local activations** — measurable foot traffic, verified participation, and organic social reach delivered by a verified-human network no digital ad platform can replicate.

Sponsor-funded activation

Brands fund the drop. GUBER places it in the target zip. Verified users participate in person — generating measurable foot traffic into a physical location.

Measurable real-world reach

Verified participation · location-stamped attendance · organic social posts from real winners — a live ad unit no Facebook campaign can replicate.

Built-in growth flywheel

Every drop is also a free user-acquisition event for GUBER. Brand dollars fund the reward; the reward funds organic growth; growth expands the network sponsors pay to reach.

Sponsor-funded growth engine.

- Sponsor pays GUBER a single rate to launch a Cash Drop in their target city or zip.
- GUBER allocates **~40%** to winner payouts, costs, and brand creative.
- Remaining **~60%** is gross platform margin.
- Each drop is also a **free user-acquisition event** — every winner posts proof, every player downloads the app to participate.
- **Multiple sponsored Cash Drops** already live in market. Winners have publicly posted on Facebook (next slide).

~60%

GROSS PLATFORM MARGIN

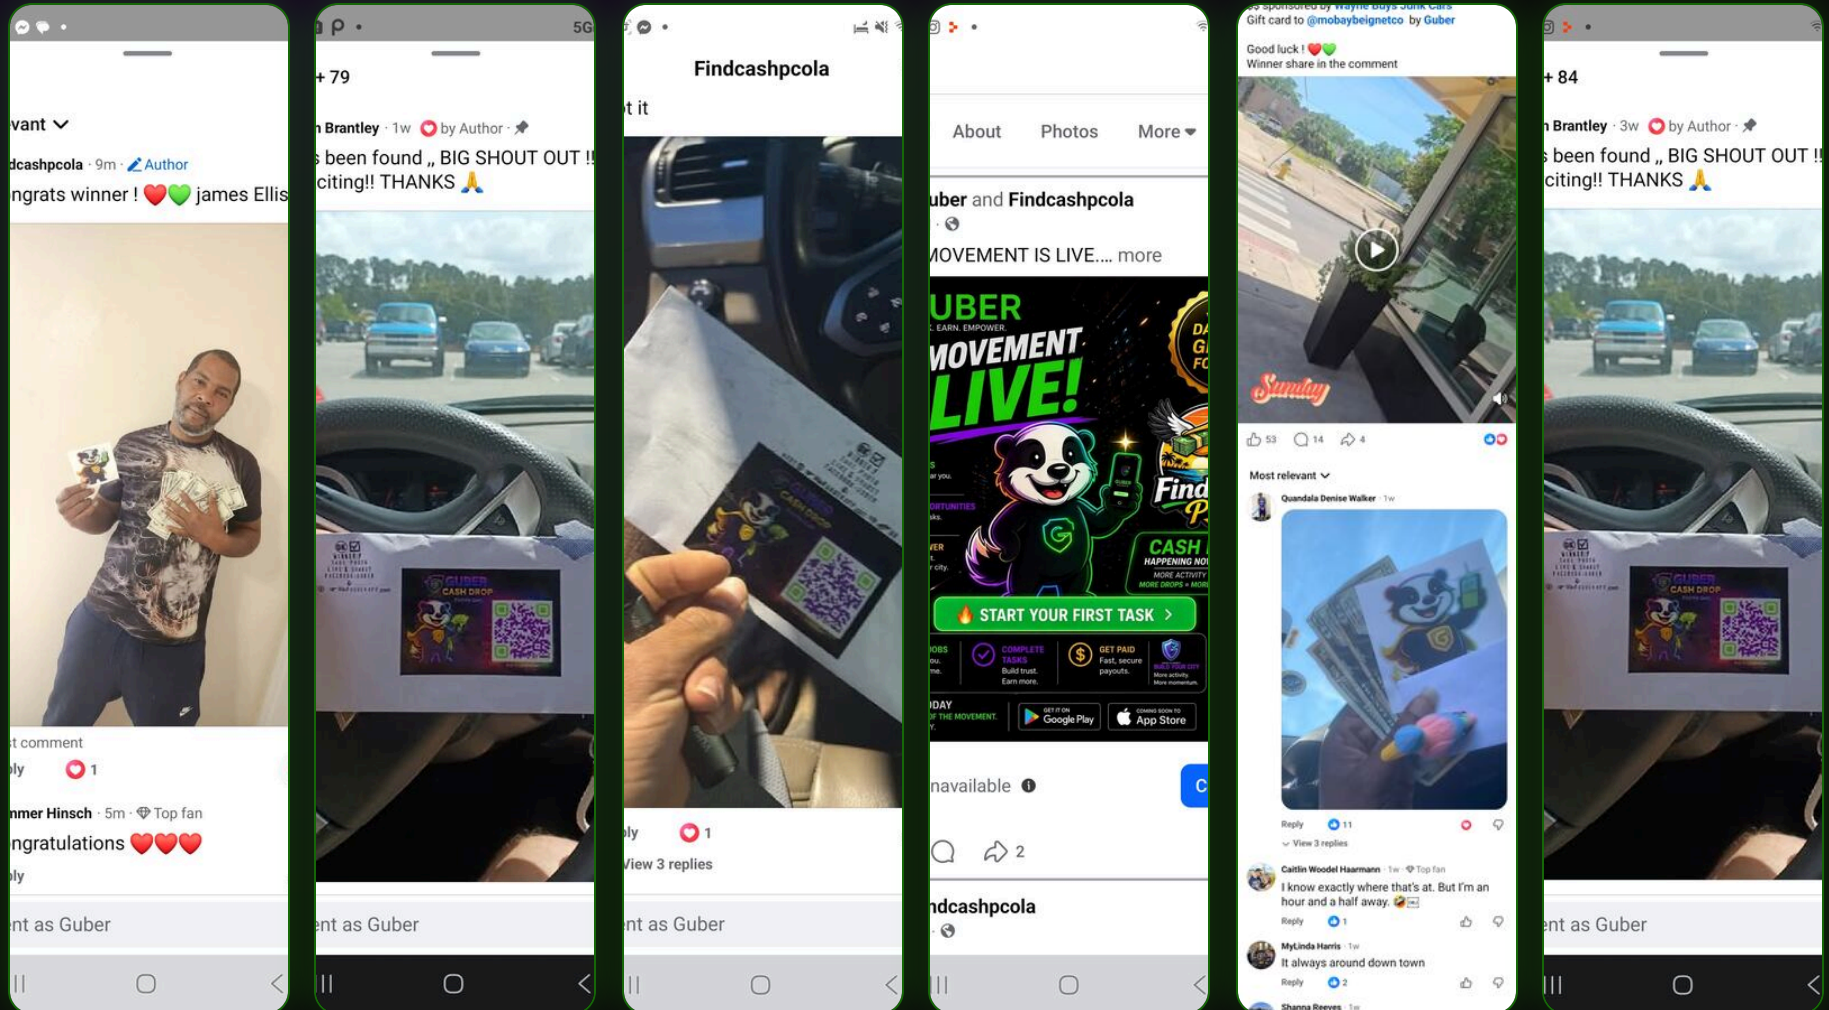

on every sponsor dollar

Migration plan: sponsor billing is collected directly during the grassroots launch phase. Migrating onto Stripe in the next release so every sponsor dollar flows through the same money ledger as the rest of the platform — clean invoicing, instant receipts, full audit trail.

REAL PROOF

Real winners. Real posts. Real proof.

A sample of GUBER Cash Drop winners who publicly posted their wins to Facebook. **Brand-sponsored, real cash, organic social reach** — all in market today.

Sponsored, not subsidized — payouts funded by brands, not GUBER.

Organic viral loop — winners post in their own words, on their own networks.

Proof of concept, in market — running and paying out today.

COMMUNITY IMPACT

Designed to stimulate local economies.

Every dollar that moves through GUBER moves between people in the same neighborhood. The platform is built to keep money local, surface real opportunity, and make safe transactions between strangers possible.

For everyday people

- Find work in your own city — no commute, no recruiter
- Earn fast income from real tasks, paid through Stripe
- Help neighbors and build a portable reputation doing it
- Complete real-world tasks for real people — verified on both sides

For local businesses & communities

- Support local businesses through Cash Drop activations
- Drive real foot traffic into physical locations
- Create safer local transactions with ID, payment, and proof on every job
- Help everyday people earn — not extract value out of the community

Economic empowerment is not a side effect of GUBER — it's the design.

AI or Not — the trust subscription.

A standalone trust product live at /ai-or-not. As AI-generated profiles, listings, and reviews flood every other marketplace, "verified human" becomes a feature people pay for.

What it does

- **AI-image detection** — paste or upload an image, get an AI-or-real verdict in seconds.
- **Unlimited text verification** — detect AI-generated copy in listings, messages, reviews.
- **Verified-human badge** on the user's GUBER profile so anyone transacting with them sees the trust signal instantly.
- Same engine powers GUBER's **internal moderation pipeline** — every subscription dollar rides on infrastructure the marketplace already needs.

How it makes money

PRODUCT	PRICE	RAIL
Trust Box subscription	\$4.99 / mo	Stripe (web) · ExternalPurchaseSheet (iOS, U.S.)
Verified-human badge	Included	Bundled with Trust Box
Internal moderation reuse	Cost offset	Same engine, no extra spend

Apple-compliant on iOS: required disclosure shown before Stripe checkout opens in SFSafariViewController — no IAP cut, no entitlement risk.

Recurring digital revenue with software-margin economics — bolted onto the same verified-identity audience that already pays for jobs, Studio, and Day-1 OG.

DEFENSIBILITY

Why we win.

No incumbent collects all four primitives — verified identity, on-platform money, structured proof of work, and an open category set — under one roof. GUBER does.

	CRAIGSLIST · FB GROUPS	TASKRABBIT · HANDY	UBER · DOORDASH	GUBER
Verified identity (both sides)	—	Workers only	Workers only	✓ Both
Money on-platform	—	✓	✓	✓
Structured proof of work	—	—	Receipt only	✓ GPS + photo + checklist
Open category set	✓ but unsafe	Limited	Single vertical	✓ Open + verified
B2B side (talent + data)	—	—	—	✓ Scout Plan + Observations
Brand-sponsored gamification	—	—	—	✓ Cash Drops

Defensibility is the **verified-identity + proof-of-work data** we accumulate per user — **none of which the incumbents collect.**

TRACTION · OPERATIONAL STATUS

What's already real.

Credibility is built on what's **in the ground today** — not on slideware.

Live product

Shipped on web and Google Play.
Active production deployment. iOS
App Store launch in progress.

Stripe Connect infrastructure

Marketplace payment rails wired
end-to-end — escrow, payout,
ledger, webhooks, dispute flow.

GPS verification logic

Location-stamped proof engine
running across every job type.
Tamper-resistant by design.

Verify & Inspect system

End-to-end V&I product live in
production — vehicles, properties,
marketplace, salvage.

AI or Not trust feature

Standalone trust subscription
product live with Stripe billing and
verified-human badge.

Delaware LLC

Properly formed legal entity.
Structured for institutional
investment.

D-U-N-S Number

Registered with Dun & Bradstreet.
Eligible for enterprise vendor
programs and B2B procurement.

Mercury business banking

Active business banking
relationship. Clean books from day
one.

Google & social presence

Indexed Google business presence and active
social media footprint driving organic discovery.

Early AI search visibility

Major AI assistants can already identify GUBER /
Guberapp as a gig, verification, and trust
platform — early brand recognition in the AI-
search era.

Sex-offender screening

Trust-layer protections built into onboarding to
keep the network safe at the point of identity.

Early AI search visibility refers to recognition by AI assistants and is not an endorsement. References to specific AI products are descriptive only.

USE OF FUNDS

Use of funds — \$1M over 18 months.

Capital deployed against the highest-leverage investments for a live product entering its growth phase.

Product Development & Engineering	30%	\$300K
Marketing, Growth & Community Activation	25%	\$250K
Operations, Compliance & Trust / Safety	15%	\$150K
Business Development & Partnerships	10%	\$100K
Customer Support, Moderation & QC	10%	\$100K
Infrastructure, Cloud & Platform Scaling	5%	\$50K
Working Capital & Contingency	5%	\$50K

VALUATION

Valuation framework.

\$15M

EARLY-STAGE VALUATION FRAMEWORK

GUBER is seeking a **\$15M valuation framework** based on its live product, early infrastructure, trust-based platform model, and position within large growing markets connected to **work, verification, fraud prevention, and digital trust**.

What this framework reflects

- **Live product** — already deployed and transacting on real users.
- **Existing deployment** — web + Android live, iOS in progress.
- **Platform infrastructure** — Stripe Connect, GPS proof engine, ID verification, money ledger, dispute system already built.
- **Market opportunity** — addressable across digital trust, fraud prevention, identity verification, and the gig economy.
- **Trust & verification positioning** — a category with no current category leader.
- **Scalable economic coordination model** — designed for nationwide deployment on a lean infrastructure base.
- **Future national expansion potential** — clear product roadmap into B2B and additional verticals.

This is an early-stage valuation framework, not a guaranteed company worth. Market projections are third-party estimates and do not represent guaranteed company performance.

LONG-TERM VISION

America's Economic Super App.

Powered by **trust**, **verification**, and **opportunity infrastructure** — a single nationwide system where reputation, proof, and earning move together.

Income

The productivity engine — work, V&I, observations, portable resume. Real earnings in real communities.

Commerce & Community

Verified marketplace, sponsored activations, and local businesses funded by their own neighborhoods.

Infrastructure

A Human API for Truth that insurers, lenders, marketplaces, and OEMs plug into at scale.

Not another marketplace. **Infrastructure for real-world trust.**

guberapp.com

FOUNDER

Built from lived experience, not theory.

Dimetris Bowden

Founder & CEO · GUBER Global LLC

Solo-built · ~18 months

GUBER was built **solo over roughly 18 months** — product, full-stack engineering, payments, native mobile, admin tooling, brand. Self-taught. Every surface in this deck is **shipped code in production today**, not slideware.

Designed by someone who lived the problem firsthand — and built the system they wished existed. Real-world execution, not theory.

Today the platform is grown **conservatively and organically** — only accepting volume a one-person operation can deliver on. That discipline protects the brand. This raise removes the ceiling: **real infrastructure, a real team, and the sales motion** to turn a verified user base into a self-sustaining nationwide trust network.
