

GUBER

Built by People, for People.

The **Economic Super App** powered by a **Human API for Truth**.

Building America's economic super app through **work, opportunity, verification**, and real-world **trust infrastructure**.

INVESTOR BRIEF · 2026 · GUBERAPP.COM

Trust is breaking — online and offline.

Fake listings. Unsafe meetups. AI-generated scams. Unreliable workers. Remote buyers with no way to verify what's on the other end. Across every category of everyday transaction, the cost of **not knowing who you're dealing with** is rising.

Marketplace fraud

AI-generated photos, fake sellers, and ghost listings now infect every major buy/sell platform — from Facebook Marketplace to luxury resale.

Unsafe local transactions

Strangers meeting strangers — for jobs, sales, deliveries, services — with no shared identity layer, no shared payment ledger, no shared proof.

Real-world verification gap

Buying a car remotely. Hiring a contractor sight-unseen. Inspecting a property cross-state. Today there is no on-demand human verification network for everyday people.

The trust deficit isn't a niche problem — it's **infrastructure that doesn't exist yet**.

GUBER is the Human API for Truth.

A nationwide network connecting people who need **help, work, or verification** with real people who can deliver real-world action — backed by enforced identity, on-platform money, and structured proof of work.

ID

Verified identity, both sides

Mandatory ID + selfie verification for posters and helpers. No anonymous accounts. Sex-offender screening built into onboarding.

\$

On-platform payments

Stripe Connect for every dollar. Escrow on lock-in, payout on confirmation. Fully traceable money ledger — no off-platform handshakes.

Structured proof of work

GPS-locked photos, video, dynamic checklists. Every job ends with verifiable evidence — the proof layer no incumbent collects.

The result: **a real-world trust layer** usable for jobs, marketplace transactions, inspections, and any task where one human needs to verify something for another.

Mission

Built for everyday people.

GUBER is an **equal-opportunity platform** — designed so access to work, income, and trust does not depend on who you know, where you live, or what gatekeeper you can get past.

Opportunity should not depend on who you know.

Anyone with proof of work, a verified ID, and a willingness to show up can earn on GUBER. No résumé bias, no referral wall, no opaque platform algorithm choosing winners.

Trust should be earned through proof and action.

Reputation on GUBER is built from real, GPS-verified, timestamped jobs — not follower counts, not badges paid for, not who knows the founder. Proof beats pedigree.

Reputation becomes portable.

Every completed job, verification, and on-time payout adds to a portable, structured record the user owns — usable across categories, cities, and over time.

Technology should empower people, not just corporations.

The same trust infrastructure that powers B2B verification deals also powers a single neighbor helping another with a real-world task. One platform, both directions.

Uber + Craigslist + LinkedIn + a trust layer — built so everyday people can **earn, verify, and grow** in their own communities.

Why now.

The conditions that make GUBER necessary **did not exist five years ago**. They are accelerating now.

The trust crisis is compounding

- **AI-generated fraud** — synthetic photos, deepfake videos, and generated reviews are flooding every consumer platform.
- **Marketplace scams** — Facebook Marketplace, Craigslist, OfferUp report rising fraud at every price tier.
- **Remote buying** — used cars, equipment, real estate, and goods are increasingly purchased sight-unseen.
- **Gig sprawl** — millions of Americans now earn income outside traditional employment, with no portable trust record.

The infrastructure to fix it is finally cheap

- Smartphone GPS, on-device camera + ML, and serverless cloud make a national human-verification network **economically possible** for the first time.
- Stripe Connect lets a single platform safely move money between millions of unrelated buyers and helpers.
- The same generative-AI wave that **created** the trust crisis also makes the verification layer **visible** — "verified human" is now a feature people will pay for.

The window is open. The category does not have a category leader yet.

One platform. Seven connected layers.

Live in production today on web and Android. iOS App Store launch in progress.

Work & Hire

Guided job builder, structured categories, time-based pricing, milestones, auto-pay-increase. Pay only when a verified helper locks in.

Verify & Inspect

On-demand human verification of vehicles, properties, marketplace listings, and salvage — by GPS-located, ID-verified helpers.

GPS Proof Engine

Every job ends with location-stamped photos, video, and dynamic checklists. Verifiable evidence, not promises.

AI or Not

Trust subscription: AI-image detection, unlimited text verification, "verified human" badge on profile. **\$4.99/mo.**

Cash Drops

Brand-sponsored geo-targeted reward drops. Sponsors pay, GUBER places, users hunt. A new kind of physical ad network.

Business Tools

Verified business accounts, talent scouting, bulk job posting, observation purchasing, sponsored visibility.

Trust & Safety

ID + selfie checks, sex-offender screening, money ledger, structured dispute taxonomy, admin moderation panel.

GUBER Resume

Auto-tracked, portable work record + AI-extracted credentials (CPR, food handler, trade licenses). Reputation as equity.

The Human API for Truth.

Software can guess. **A verified human at the location, with a phone, and proof, knows.** GUBER turns that simple idea into a nationwide on-demand verification network.

How it works

- **Request** — anyone (consumer, business, marketplace) requests a real-world check or task.
- **Match** — the closest verified helper is matched in seconds.
- **Verify** — helper completes the task with GPS-locked photo, video, and structured checklist.
- **Settle** — Stripe Connect pays the helper instantly, GUBER takes its cut, requester gets evidence on file.

Every verified job adds to the helper's portable resume **and** to GUBER's proprietary real-world data layer — both compound over time.

Why this is defensible

- Two-sided verified identity — incumbents only verify one side, or neither.
- Structured GPS + photo + checklist proof — **a dataset no one else collects.**
- Network effect: every new verified helper expands what GUBER can verify, where, and how fast.
- The data layer becomes an addressable B2B product over time — insurance, lending, marketplaces, and OEMs all need real-world proof.

Market indicators.

GUBER sits at the intersection of large, named markets — all growing, all undergoing structural change, all citable to third-party research.

Market projections are third-party estimates and do not represent guaranteed company performance.

How GUBER makes money.

Multiple revenue streams across transactions, subscriptions, sponsorships, and B2B — all wired to Stripe today.

Platform fees on completed jobs

Take rate on every job completed through the marketplace. Pay-on-lock-in model.

Verify & Inspect fees

Per-verification revenue on V&I jobs — vehicles, properties, marketplace listings, salvage.

Urgent & priority job fees

Premium pricing for time-sensitive jobs and auto-pay-increase mechanics.

Business accounts

Verified business onboarding plus recurring B2B plans with talent scouting and bulk posting.

Sponsored Cash Drops

Brand-sponsored geo-targeted reward drops — gross-margin sponsorship revenue + free user acquisition.

AI or Not / Trust Toolbox

Recurring trust subscription with AI-image detection, text verification, and verified-human badge.

Marketing & visibility tools

Featured listings, sponsored visibility, content licensing for brands and businesses.

Featured visibility & advertising

Featured listings, sponsored placements, brand visibility across the marketplace and Cash Drop network.

Future B2B integrations

API access for insurance, lending, marketplaces, and OEMs that need real-world verification at scale.

Verification infrastructure licensing

License the GUBER verification stack to third-party platforms that need a Human API for Truth they didn't build themselves.

Trust data infrastructure

Aggregate, anonymized trust signals — fraud, identity, real-world activity — sold as a data product to the digital economy.

Eleven distinct monetization paths · transactions, subscriptions, sponsorships, B2B, and infrastructure licensing — diversified by design.

Community Activation

Cash Drops — a new real-world advertising network.

Cash Drops are not promotions. They are **brand-sponsored economic activations** — gamified local discovery events that put real money in real hands and real foot traffic into real businesses.

How it works

Businesses sponsor a drop. **GUBER places** it on the map in their target city or neighborhood.

Users participate physically — they go outside, hunt, find, and post their win to social. The brand gets reach. The neighborhood gets activated. The winner gets paid.

What sponsors get

Local business activations · city-wide hunts · brand-sponsored community engagement · measurable foot-traffic generation · organic social posts from real winners · reward-based exploration of their physical location. A live ad unit no Facebook campaign can replicate.

Why it's defensible

Every drop is also a **free user-acquisition event** for GUBER itself. Every winner posts proof. Every player downloads the app to participate. Brand dollars fund our growth, our growth funds the brand's reach. A flywheel competitors can't easily copy.

Sponsored Cash Drops are live in market today · multiple winners have publicly posted their wins on Facebook · gross-margin sponsorship revenue + organic acquisition in a single transaction.

Real Proof

Real winners. Real posts. Real proof.

Real winners. Real posts. Real proof.

A sample of GUBER Cash Drop winners who publicly posted their wins to Facebook. Brand-sponsored drops, real cash, real people, organic social reach — all in market today.

Sponsored, not subsidized

These payouts are funded by sponsoring businesses — not GUBER subsidy. Every win is

Organic viral loop

Winners post on their own accounts, in their own words, to their own networks. Free brand

Proof of concept, in market

The real-world ad network thesis is not theoretical. It's running, paying out, and

Community Impact

Designed to stimulate local economies.

Every dollar that moves through GUBER moves between people in the same neighborhood. The platform is built to keep money local, surface real opportunity, and make safe transactions between strangers possible.

For everyday people

- Find work in your own city — no commute, no recruiter
- Earn fast income from real tasks, paid through Stripe
- Help neighbors and build a portable reputation doing it
- Complete real-world tasks for real people — verified on both sides

For local businesses & communities

- Support local businesses through Cash Drop activations
- Drive real foot traffic into physical locations
- Create safer local transactions with ID, payment, and proof on every job
- Help everyday people earn — not extract value out of the community

Economic empowerment is not a side effect of GUBER — it's the design.

What's already real.

Credibility is built on what's **in the ground today** — not on slideware.

Live product

Shipped on web and Google Play.
Active production deployment.
iOS App Store launch in progress.

Stripe Connect infrastructure

Marketplace payment rails wired end-to-end — escrow, payout, ledger, webhooks, dispute flow.

GPS verification logic

Location-stamped proof engine running across every job type.
Tamper-resistant by design.

Verify & Inspect system

End-to-end V&I product live in production — vehicles, properties, marketplace, salvage.

AI or Not trust feature

Standalone trust subscription product live with Stripe billing and verified-human badge.

Delaware LLC

Properly formed legal entity.
Structured for institutional investment.

D-U-N-S Number

Registered with Dun & Bradstreet.
Eligible for enterprise vendor programs and B2B procurement.

Mercury business banking

Active business banking relationship. Clean books from day one.

Google & social presence

Indexed Google business presence and active social media footprint driving organic discovery.

Early AI search visibility

Major AI assistants can already identify GUBER / Guberapp as a gig, verification, and trust platform — early brand recognition in the AI-search era.

Sex-offender screening

Trust-layer protections built into onboarding to keep the network safe at the point of identity.

Early AI search visibility refers to recognition by AI assistants and is not an endorsement. References to specific AI products are descriptive only.

Use of funds — \$1M over 18 months.

Capital deployed against the highest-leverage investments for a live product entering its growth phase.

Product Development & Engineering	30%	\$300K
Marketing, Growth & Community Activation	25%	\$250K
Operations, Compliance & Trust / Safety	15%	\$150K
Business Development & Partnerships	10%	\$100K
Customer Support, Moderation & QC	10%	\$100K
Infrastructure, Cloud & Platform Scaling	5%	\$50K
Working Capital & Contingency	5%	\$50K

Valuation framework.

\$15M

EARLY-STAGE VALUATION FRAMEWORK

GUBER is seeking a **\$15M valuation framework** based on its live product, early infrastructure, trust-based platform model, and position within large growing markets connected to **work, verification, fraud prevention, and digital trust**.

What this framework reflects

- **Live product** — already deployed and transacting on real users.
- **Existing deployment** — web + Android live, iOS in progress.
- **Platform infrastructure** — Stripe Connect, GPS proof engine, ID verification, money ledger, dispute system already built.
- **Market opportunity** — addressable across digital trust, fraud prevention, identity verification, and the gig economy.
- **Trust & verification positioning** — a category with no current category leader.
- **Scalable economic coordination model** — designed for nationwide deployment on a lean infrastructure base.
- **Future national expansion potential** — clear product roadmap into B2B and additional verticals.

This is an early-stage valuation framework, not a guaranteed company worth. Market projections are third-party estimates and do not represent guaranteed company performance.

America's Economic Super App.

The long-term goal is to build the **trust and opportunity layer for everyday life**. GUBER is designed to become **infrastructure for how people earn, verify, connect, and interact in the real world** — connecting people, work, verification, commerce, trust, community, and opportunity inside one nationwide system.

Income

The productivity engine — work, hire, V&I, observations, portable resume. Real earnings for real people in their own communities.

Commerce & Community

Verified marketplace · sponsored Cash Drops as a real-world ad network · local businesses activated · neighborhoods stimulated.

Infrastructure

The verification network — a Human API for Truth that insurers, lenders, marketplaces, and OEMs plug into at scale.

From local jobs to nationwide verification networks, GUBER is building **a system where reputation, proof, and opportunity move together**.

*Built by people, for people. A serious infrastructure company — and a movement built for real people.
Both are the same platform.*

Founder

Built from lived experience, not theory.

Dimetris Bowden

Founder & CEO · GUBER Global LLC

Solo-built · ~18 months

GUBER was built solo over roughly 18 months — product, full-stack engineering, payments, native mobile, admin tooling, brand. Self-taught. Every surface in this deck is shipped code in production today, not a pitch.

Designed by someone who understands how hard it is for everyday people to access opportunity safely — and who built the system they wished existed. Real-world experience, not slideware. People-first vision, not theory.

Today the platform is grown conservatively and organically — only accepting the volume the current infrastructure and a one-person operation can fully deliver on. That discipline protects the brand and the user, but it caps how fast we move.

This raise removes that ceiling: real infrastructure, a real team, and the paid-acquisition and B2B sales motion to turn an organic, verified user base into a self-sustaining nationwide trust and opportunity network.

Investors, advisors, operators — anyone who can move quickly and meaningfully — every serious inbound gets a serious reply. The app is live. The mission is clear. The window is open.
